THE SMART PRODUCT CANVAS.

Product

Team name

What problem is being solved?

How much control should the user have?

What use cases could lead to errors?

What other products/systems/functions overlap/synergize with this one?

How would users solve the problem without "smartness"?

What data is/should be generated from use?

How can the user make sense of what the product does, or how it "thinks"? [feedback, affordances, hints]

Would you want this in your home or office?
